(54) Title: CONTINUOUS CASTING METHOD, CAST MEMBER, METAL WORKED ARTICLE, AND CONTINUOUS CAST-
ING APPARATUS

(57) Abstract: The continuous casting method causes the final solidification portion to be displaced from the central portion of the cast member to reduce the influence of cast defects which may be generated on a plastic worked article. In a continuous casting method for continuously manufacturing a cast member by driving a plurality of rotational molding members disposed so as to form a casting space, the plurality of rotational molding members are differentiated in temperature. In a preferable embodiment, a portion of one of the rotational molding members which starts to come into contact with molten metal is set to a temperature of [(melting point or liquidus temperature of the metal) x 0.35] or more, and the other of the rotational molding members are cooled.
